

Antimicrobial Stewardship Services

Resistant bacterial infections are on the rise, leading to decreased antimicrobial options, higher mortality, and increased costs.

The mission of Antimicrobial Stewardship Programs (ASP) is to decrease the use of broad-spectrum antibiotics & length of therapy, with the goal of reducing antimicrobial resistance, healthcare acquired infections, & overall costs.

The physicians of Colorado Infectious Disease Associates are actively involved in ASP programs of major metropolitan Denver hospitals, as well as rehabilitation and long-term care facilities. These programs have proven effective in numerous studies and improved care can be delivered within and outside of the Denver metropolitan region.

If your rehabilitation or long-term care center is interested in implementing a cost effective and patient centered program with Infectious Disease expertise, contact Sean Pawlowski, MD, at 303.777.0781
